

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE**

<b>In Re:</b>	U.S. Patent No. 7,216,651
<b>First Named Inventor:</b>	Argenta et al.
<b>Atty Docket:</b>	0101-P00636US4
<b>Issued:</b>	May 15, 2007
<b>Appl. No.:</b>	09/863,234
<b>Filed:</b>	May 23, 2001
<b>For:</b>	WOUND TREATMENT EMPLOYING REDUCED PRESSURE

**REQUEST UNDER 37 CFR 1.322 FOR CERTIFICATE  
OF CORRECTION OF PATENT OFFICE MISTAKE**

It is respectfully requested that a Certificate of Correction be issued correcting the Patent Office printing error(s) on the evidence set forth below. The most recent version of the claims prior to issuance of the patent is found in the amendment filed by Applicant on 27 Nov 2006 (attached). Evidence the Office's claim renumbering is provided in the Examiner's Issue Classification sheet (attached).

**Printing Error 1:**

Claim 1, line 10. **Insert --(c)-- before** "a fluid trap".

Evidence: Claim 9 of the 27 Nov 2006 amendment reads in relevant part "reduced pressure; and (c) a fluid trap...". Application Claim 9 was renumbered by the Office to patented Claim 1. Claim 1 in the issued patent omits the characters "(c)" from the quoted claim text.

**Printing Error 2:**

Claim 4, line 1. **Replace** "screen" **with** --porous material--.

Evidence: Claim 10 of the 27 Nov 2006 amendment reads in relevant part "...said porous material comprises...". Application Claim 10 was renumbered by the Office to patented Claim 4. Claim 4 in the issued patent recites "...said screen comprises...". The word "screen" should be replaced with --porous material--.

**Printing Error 3:**

Claim 16, line 1. **Replace** "5" **with** --12--.

Evidence: Claim 92 of the 27 Nov 2006 amendment depended from claim 14. The Office renumbered application claim 92 to patented claim 16 and renumbered application claim 14 to patented claim 12. Claim 16 issued as depending from claim 5. Claim 16 should depend from claim 12, not claim 5.

**Printing Error 4:**

Claim 42, line 6. **Replace** "Locating" **with** --locating--.

Claim 42, line 13. **Replace** "v" **with** --vi--.

Claim 42, line 15. **Replace** "vi" **with** --vii--.

Evidence: Claim 30 of the 27 Nov 2006 amendment reads in relevant part "iii. locating a porous material...". The Office renumbered application claim 30 to patented claim 42. The Office capitalized the word "locating"; the capitalization of "location" should be removed.

Claim 30 of the 27 Nov 2006 amendment also reads in relevant part "vi. interposing..." and "vii. maintaining...". The subparagraphs of patented claim 42 are numbered incorrectly, with "v" repeated twice and "vii" omitted.

**Printing Error 5:**

Claim 80, line 1. **Replace** "apparatus" **with** --appliance--.

Claim 80, lines 1-2. **Replace** "1 and 3-6" **with** --1, 3, 6, and 7--.

Evidence:

Claim 87 of the 27 Nov 2006 amendment reads in relevant part "The appliance according to...". The Office renumbered application claim 87 to patented claim 80. Patented claim 80 now reads in part "The apparatus according to...". The word "apparatus" should be "appliance".

Claim 87 of the 27 Nov 2006 amendment also reads in relevant part "...to any one of claims 9 and 84-86...". The Office renumbered application claims 9, 84, 85, and 86 to 1, 6, 7, and 3 respectively. Therefore, patented claim 87 should depend from claims 1, 3, 6, and 7. As currently written, patented claim 80 incorrectly depends from claims 1 and 3-6.

**Printing Error 6:**

Claim 81, line 1. **Replace** "method" **with** --appliance--.

Claim 81, line 4. **Replace** "and and" **with** --and--.

**Evidence:**

Claim 91 of the 27 Nov 2006 amendment reads in relevant part "The appliance according to...". The Office renumbered application claim 91 to patented claim 81. As currently written, patented claim 81 reads "The method according to...". The word "method" should be deleted and the word "appliance" should be inserted in its place.

Claim 91 of the 27 Nov 2006 amendment also reads in relevant part "...production and non-production...". As currently written, patented claim 81 reads "...production and and non-production...". The second instance of the word "and" should be deleted.

**Printing Error 7:**

Claim 82, line 1. **Replace** "appliance" **with** --apparatus--.

**Evidence:** Claim 95 of the 27 Nov 2006 amendment reads in relevant part "The apparatus according to...". The Office renumbered application claim 95 to patented claim 82. Patented claim 82 now reads in part "The appliance according to...". The word "appliance" should be "apparatus".

It is respectfully requested that a Certificate of Correction be issued to correct the above-noted printing error(s). In the event a fee is required and is not enclosed, the Commissioner is authorized to charge any underpayment or credit any overpayment to the account of the undersigned attorneys, Account No. 04-1406.

Respectfully submitted,

DANN, DORFMAN, HERRELL & SKILLMAN  
Attorneys for Applicant

By /Niels Haun/

## UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

Page 1 of 1

PATENT NO. : 7,216,651  
APPLICATION NO.: 09/863,234  
ISSUE DATE : May 15, 2007  
INVENTOR(S) : Argenta et al.

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Claim 1, line 10. Insert --(c)-- before "a fluid trap".  
Claim 4, line 1. Replace "screen" with --porous material--.  
Claim 16, line 1. Replace "5" with --12--.  
Claim 42, line 6. Replace "Locating", with --locating--.  
Claim 42, line 13. Replace "v" with --vi--.  
Claim 42, line 15. Replace "vi" with --vii--.  
Claim 80, line 1. Replace "apparatus", with --appliance--.  
Claim 80, lines 1-2. Replace "1 and 3-6" with --1, 3, 6, and 7--.  
Claim 81, line 1. Replace "method" with --appliance--.  
Claim 81, line 4. Replace "and and" with --and--.  
Claim 82, line 1. Replace "appliance" with --apparatus--.

### MAILING ADDRESS OF SENDER (Please do not use customer number below):

Dann Dorfman Herrell and Skillman  
1601 Market St. Suite 2400  
Philadelphia, PA 19103

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

## Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

**Amendments to the Claims**

Please amend the claims to read as follows.

1-8 (Canceled).

9. (Currently Amended) An appliance for administering a reduced pressure treatment to a wound, comprising

- (a) a one-piece flexible adhesive cover configured to cover and enclose the wound and adapted to maintain reduced pressure at the site of the wound;
- (b) reduced pressure supply means for connection to a source of suction, said reduced pressure supply means cooperating with said cover to supply at least 0.11 atm of reduced pressure; and
- (c) a fluid trap interconnected between said reduced pressure supply means and said cover for collection of wound exudate.

10. (Currently Amended) The appliance as recited in claim 86 wherein said porous material screen comprises a porous sheet.

11. (Previously Presented) The appliance as recited in claim 9 wherein said cover includes an adhesive material adapted to secure said cover to the tissue surrounding the wound.

12. (Currently Amended) The appliance as recited in claim 86 wherein said porous material screen comprises a foam screen.

13. (Currently Amended) An appliance for administering a reduced pressure treatment to a wound comprising

- (a) a flexible cover adapted to cover and enclose the wound and adapted to maintain reduced pressure at the site of the wound;
- (b) a continuous, uninterrupted adhesive seal provided on said cover adapted to seal and adhere said cover to tissue surrounding the wound;

Application No. 09/863,234  
Docket No. 0101-P00636US4

Art Unit 3736  
Examiner: Lacyk, J.

- (c) a source of suction, cooperating with said cover to supply at least 0.11 atm of reduced pressure; and
- (d) a fluid trap interconnected between said cover and said source of suction ~~reduced pressure supply means~~, said trap adapted to capture wound exudate.
14. (Currently Amended) An apparatus for treating a wound comprising
- (a) a vacuum system adapted to produce a reduced pressure, wherein said vacuum system includes a collection device for collecting fluid aspirated from the wound; and
- (b) a reduced pressure appliance operably connected with said vacuum system adapted to apply said reduced pressure to the wound, the appliance including
- a flexible cover adapted to cover and enclose the wound and adapted to maintain reduced pressure at the site of the wound;
- a porous material comprising a synthetic polymer for placement under said cover at the wound;
- an adhesive seal provided on said cover and adapted to seal and adhere said cover to tissue surrounding the wound; and
- reduced pressure supply means for connection with the vacuum system adapted to supply said reduced pressure within said cover to the wound.
15. (Canceled).
16. (Previously Presented) The apparatus of claim 14 wherein said reduced pressure supply means comprises a length of tubing, said collection device comprises an aspirating container connected along said length of tubing between said vacuum system and cover, and said collection device comprises a flotation valve within said aspirating container for blocking said tubing when a predetermined amount of fluid is collected within said container.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

17. (Previously Presented) The apparatus of claim 14 wherein said collection device comprises an expandable chamber and a sensing means for sensing expansion of said expandable chamber, said sensing means operatively connected with said vacuum system so that said reduced pressure is halted when a predetermined expansion of said expandable chamber is sensed by said sensing means.

18. (Previously Presented) The apparatus of claim 14 wherein said reduced pressure supply means comprises a length of tubing and a filter along said tubing, said filter having pores that block the supply of reduced pressure via said tubing when said pores are filled with said fluid.

19. (Currently Amended) A method for treating a wound, comprising

- i. locating a flexible adhesive cover over the wound to provide a chamber between the cover and the wound, said cover adapted for maintaining ~~said~~ reduced pressure at the wound;
- ii. adhesively sealing and adhering the periphery of said cover to tissue surrounding the wound;
- iii. operably connecting a vacuum system with said chamber at said seal for producing said reduced pressure;
- iv. interposing a fluid trap between said cover ~~suction port~~ and said vacuum system source; and
- v. maintaining reduced pressure to promote the formation of granulation tissue at the wound until the wound has progressed toward a selected stage of healing.

20-22 (Canceled).

23. (Currently Amended) An appliance for administering a reduced pressure treatment to a wound comprising

- (a) a one-piece flexible sheet adapted to cover and enclose the wound and adapted to maintain reduced pressure at the site of the wound;

- (b) a porous material comprising a synthetic polymer for placement under the sheet at the wound;
  - (c) an adhesive seal provided on said sheet adapted to seal and adhere said sheet to tissue surrounding the wound;
  - (((c))d) a source of suction cooperating with said sheet and said seal to supply reduced pressure beneath said sheet; and
  - (((d))e) a fluid trap interposed between said sheet cover and said source of suction, said fluid trap including a shut off for halting the application of reduced pressure when a predetermined amount of fluid is collected within said trap.
24. (Currently Amended) An appliance for administering a reduced pressure treatment to a wound comprising
- (a) a one-piece flexible cover adapted to cover and enclose the wound and to provide a vacuum chamber about the wound to maintain reduced pressure at the site of the wound;
  - (b) an adhesive seal provided on said cover adapted to seal and adhere said cover to tissue surrounding the wound;
  - (c) reduced pressure supply means for connection to a source of suction, said reduced pressure supply means cooperating with said vacuum chamber to supply said reduced pressure of at least 0.11 atm beneath said vacuum chamber, wherein said reduced pressure supply means comprises a suction port on said vacuum chamber; and
  - (d) a screen adapted to promote the formation of granulation tissue at the wound for placement at a location within said vacuum chamber and secured in said location by the periphery of said vacuum chamber.
25. (Previously Presented) The appliance of claim 24 wherein said screen comprises a flexible, sheet-like mesh.

26. (Currently Amended) The appliance of claim 24 wherein said seal includes ~~an adhesive material on the cover adapted to adhere to tissue surrounding the wound and a~~ a seal member at least partially overlying said cover.
27. (Currently Amended) An apparatus for treating a wound comprising
- (a) a vacuum system adapted to produce a reduced pressure, wherein said vacuum system comprises
    - i. a vacuum pump adapted to supply at least 0.11 atm of reduced pressure; and
    - ii. a filter for preventing said pump from venting micro-organisms aspirated from the wound; and
  - (b) a reduced pressure appliance operably connected with said vacuum system adapted to apply said reduced pressure to the wound, the appliance including
    - a flexible cover adapted to cover and enclose the wound and adapted to maintain reduced pressure at the site of the wound;
    - a porous material comprising a synthetic polymer for placement under the cover at the wound;
    - an adhesive seal disposed about the periphery of said cover and adapted to seal and adhere said cover to tissue surrounding the wound;
    - reduced pressure supply means for connection with the vacuum system, wherein said reduced pressure supply means comprises a length of tubing connected between said vacuum system and said cover; and
    - a fluid trap interposed between said cover and said reduced pressure supply means.
28. (Previously Presented) The apparatus of claim 27 wherein said filter is connected along said tubing between said pump and said fluid trap for preventing contamination of said pump.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

29. (Previously Presented) The apparatus of claim 27, wherein said vacuum system comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.
30. (Currently Amended) A method of treating a wound comprising the steps of
- i. providing a vacuum source capable of providing at least 0.11 atm of reduced pressure;
  - ii. locating a flexible adhesive cover over the wound, said cover having a suction port;
  - iii. locating a porous material comprising a synthetic polymer under said cover at the wound;
  - iv. adhesively sealing and adhering the periphery of said cover to tissue surrounding the wound to form a continuous seal;
  - [[i]]v. operably connecting said suction port with said vacuum system for producing said reduced pressure;
  - vi. interposing a fluid trap between said suction port and said vacuum source; and
  - vii. maintaining reduced pressure of at least 0.11 atm at the wound until the wound had progressed toward a selected stage of healing.
31. (Canceled).
32. (Previously Presented) The method of claim 30, wherein said selected stage of healing is a reduction in bacterial density in the wound by at least 50%.
33. (Currently Amended) A device for promoting closure of a wound comprising
- (a) a deformable cover adapted to be placed over the wound;
  - (b) a porous material comprising a synthetic polymer disposed under said cover for placement at the wound;

- (((b))c) an adhesive layer on the cover adapted to form a liquid impermeable seal between said cover and tissue surrounding the wound; and
- (((c))d) reduced pressure supply means for supplying reduced pressure and adapted to maintain at least 0.11 atm of reduced pressure therein to said enclosed volume and for deforming said cover so as to exert tension upon the tissue surrounding the wound; and
- (((d))e) a fluid trap interposed between said cover and said supply means.

34. (Previously Presented) A method of promoting attachment of a skin graft onto a wound, comprising the steps of
- (a) attaching the graft to the wound; and
  - (b) applying reduced pressure to the graft to promote blood circulation within the graft, wherein said applying step comprises the steps of
    - i. placing a porous screen over the graft on the wound;
    - ii. locating a cover over the graft on the wound, said cover adapted for maintaining said reduced pressure at the wound, said cover having a suction port;
    - iii. sealing the periphery of said cover to tissue surrounding the wound;
    - iv. operably connecting said suction port with a vacuum system for producing said reduced pressure; and
    - v. interposing a fluid trap between said suction port and said vacuum source.
35. (Previously Presented) The method of claim 34 wherein the graft is a skin flap, the method comprising the steps of
- (a) applying reduced pressure to a region of skin adjacent to the wound, and
  - (b) forming the flap by detaching skin from said region prior to said attaching step.
36. The method of claim 34 comprising the steps of
- (a) applying reduced pressure to a region of skin for use as the skin graft; and
  - (b) forming the graft by detaching skin from said region.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

37. (Currently Amended) An apparatus for facilitating the healing of wounds, comprising a flexible cover adapted to cover and enclose a wound and adapted to maintain reduced pressure at the site of the wound;  
a porous material comprising a synthetic polymer disposed under said cover for placement at the wound;  
a suction pump for creating a reduced pressure of at least 0.11 atm on the area of tissue including and surrounding the wound; and  
a liquid impermeable adhesive seal provided on said cover adapted to seal and adhere said cover to tissue surrounding the wound reduced pressure at said wound.
38. (Currently Amended) The apparatus according to claim ~~422~~ 37 in which said porous material ~~screen~~ comprises an open-cell polymer foam.
39. (Currently Amended) The apparatus according to claim ~~422~~ 37 in which said porous material ~~screen~~ comprises a porous, elastic, semi-rigid member.
40. (Previously Presented) The apparatus according to claim 37, in which said seal includes a flexible sealing rim in contact with said tissue surrounding said wound.
41. (Currently Amended) The apparatus according to claim ~~422~~ 37, in which said ~~seal cover~~ includes a flexible polymer sheet overlying said porous material ~~screen means~~, said polymer sheet having an adhesive on at least a surface facing the wound to attach and seal said polymer sheet to said surrounding tissue.
42. (Previously Presented) The apparatus according to claim 37, in which said seal includes a sealing cuff in contact with said tissue surrounding the wound.
43. (Previously Presented) The apparatus according to claim 37, in which said pump provides at least 0.11 atm of suction.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

44. (Previously Presented) The apparatus according to claim 37, in which said pump provides at least 0.136 atm of suction.
45. (Previously Presented) The apparatus according to claim 37, in which said pump provides at least 14 pounds per square inch suction.
46. (Previously Presented) An apparatus according to claim 37, in which said pump operates cyclically to provide periods of application and non-application of suction.
47. (Previously Presented) An apparatus according to claim 37, in which said pump operates continuously.
48. (Previously Presented) An apparatus according to claim 37, in which said pump supplies a reduced pressure between about 0.5 and 0.99 atmospheres to the wound.
49. (Previously Presented) An apparatus according to claim 37, wherein said pump supplies a reduced pressure between about 0.3 and 0.99 atmospheres to the wound.
50. (Previously Presented) An apparatus according to claim 37, wherein said pump supplies a reduced pressure between about 0.5 and 0.8 atmospheres to the wound.
51. (Canceled).
52. (Currently Amended) An apparatus for treating a wound, comprising  
a flexible adhesive cover adapted to cover and enclose a wound and adapted to maintain reduced pressure at the site of the wound;  
a porous material comprising a synthetic polymer for placement under the cover at the wound;  
a liquid impermeable adhesive seal provided on said cover adapted to seal and adhere said cover to tissue surrounding the wound;

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

a tubular member having an end extending from beneath the seal edge to a location external to said cover for supplying reduced pressure beneath the cover; and a fluid trap in fluid communication with said tubular member, said fluid trap including a shut off for halting the application of reduced pressure when a predetermined amount of fluid is collected within said trap.

53. (Currently Amended) The apparatus of claim 52 wherein the porous material comprises ~~comprising~~ a foam section configured to overlay the wound, and wherein said first end of said tubular member is embedded within the foam section.

54. (Previously Presented) The apparatus of claim 52 including a vacuum source that supplies a reduced pressure between about 0.3 and 0.99 atmospheres to the wound.

55. (Previously Presented) The apparatus of claim 52 including a vacuum source that supplies a reduced pressure between about 0.5 and 0.99 atmospheres to the wound.

56. (Previously Presented) The apparatus of claim 52 including a vacuum source that supplies a reduced pressure between about 0.5 and 0.8 atmospheres to the wound.

57-83 (Canceled).

84. (Previously Presented) The appliance according to claim 9, wherein the reduced pressure supply means is adapted to supply at least 0.136 atm of reduced pressure.

85. (Currently Amended) The appliance according to claim 84, comprising a porous material comprising a synthetic polymer screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

86. (Currently Amended) The appliance according to claim 9, comprising a porous material comprising a synthetic polymer screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

87. (Previously Presented) The appliance according to any one of claims 9 and 84-86, wherein the reduced pressure supply means comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

88. (Previously Presented) The appliance according to claim 13, wherein the suction source is adapted to supply at least 0.136 atm of reduced pressure.

89. (Currently Amended) The appliance according to claim 88, comprising a porous material comprising a synthetic polymer screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

90. (Currently Amended) The appliance according to claim 13, comprising a porous material comprising a synthetic polymer screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

91. (Previously Presented) The appliance according to any one of claims 13 and 88-90, wherein the suction source comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

92. (Previously Presented) The apparatus according to claim 14, wherein the reduced pressure supply means is adapted to maintain at least 0.136 atm of reduced pressure.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

93. (Currently Amended) The apparatus according to claim 92, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

94. (Currently Amended) The apparatus according to claim 14, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

95. (Previously Presented) The apparatus according to any one of claims 14 and 92-94, wherein the reduced pressure supply means comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

96. (Previously Presented) The method according to claim 19, comprising maintaining reduced pressure of at least 0.136 atm at the wound to promote the formation of granulation tissue until the wound has progressed toward a selected stage of healing.

97. (Currently Amended) The method according to claim 96, comprising locating a porous material comprising a synthetic polymer under screen within the cover, the porous material screen adapted to promote the formation of granulation tissue in the wound.

98. (Currently Amended) The method according to claim 19, comprising locating a porous material comprising a synthetic polymer under screen within the cover, the porous material screen adapted to promote the formation of granulation tissue in the wound.

99. (Previously Presented) The method according to any one of claims 19 and 96-98, wherein the reduced pressure is applied in alternating intervals of application and non-application.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

100. (Previously Presented) The appliance according to claim 23, wherein the suction source is adapted to supply at least 0.136 atm of reduced pressure.

101. (Currently Amended) The appliance according to claim 100, wherein the porous material is comprising a screen disposed under the sheet and adapted to promote the formation of granulation tissue in the wound.

102. (Currently Amended) The appliance according to claim 23, wherein the porous material is comprising a screen disposed under the sheet and adapted to promote the formation of granulation tissue in the wound.

103. (Previously Presented) The appliance according to any one of claims 23 and 100-102, wherein the suction source comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

104. (Previously Presented) The appliance according to claim 24, wherein the reduced pressure supply means is adapted to supply at least 0.136 atm of reduced pressure.

105. (Previously Presented) The appliance according to claim 104, wherein the seal comprises a liquid impervious seal.

106. (Previously Presented) The appliance according to claim 24, wherein the seal comprises a liquid impervious seal.

107. (Previously Presented) The appliance according to any one of claims 24 and 104-106, wherein the reduced pressure supply means comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

108. (Previously Presented) The apparatus according to claim 27, wherein the pump is adapted to supply at least 0.136 atm of reduced pressure.

109. (Currently Amended) The apparatus according to claim 108, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

110. (Currently Amended) The apparatus according to claim 27, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

111. (Previously Presented) The apparatus according to any one of claims 27 and 108-110, wherein the pump comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

112. (Previously Presented) The method according to claim 30, comprising providing a vacuum source capable of providing at least 0.136 atm of reduced pressure.

113. (Currently Amended) The method according to claim 112, wherein the porous material is comprising locating a screen within the cover, the screen adapted to promote the formation of granulation tissue in the wound.

114. (Currently Amended) The method according to claim 30, wherein the porous material is comprising locating a screen within the cover, the screen adapted to promote the formation of granulation tissue in the wound.

115. (Previously Presented) The appliance according to any one of claims 30 and 112-114, wherein said reduced pressure is applied in alternating periods of application and non-application.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

116. (Previously Presented) The device according to claim 33, wherein the reduced pressure supply means is adapted to supply at least 0.136 atm of reduced pressure.

117. (Currently Amended) The device according to claim 116, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

118. (Currently Amended) The device according to claim 33, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

119. (Previously Presented) The device according to any one of claims 33 and 116-118, wherein the reduced pressure supply means comprises control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

120. (Previously Presented) The apparatus according to claim 37, wherein the suction pump is adapted to maintain at least 0.136 atm of reduced pressure.

121. (Currently Amended) The apparatus according to claim 120, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

122. (Currently Amended) The apparatus according to claim 37, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

123. (Previously Presented) The apparatus according to any one of claims 37 and 120-122, wherein the pump comprises control means for cyclically controlling said production of

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

reduced pressure in alternating periods of production and non-production of reduced pressure.

124. (Previously Presented) The apparatus according to claim 52, comprising a source of suction cooperating with said cover and seal to supply reduced pressure of at least 0.11 atm beneath said cover.

125. (Currently Amended) The apparatus according to claim 124, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

126. (Currently Amended) The apparatus according to claim 52, wherein the porous material is comprising a screen disposed within the cover and adapted to promote the formation of granulation tissue in the wound.

127. (Previously Presented) The apparatus according to any one of claims 52 and 124-126, comprising a reduced pressure supply means cooperating with the cover, the supply means comprising a control means for cyclically controlling said production of reduced pressure in alternating periods of production and non-production of reduced pressure.

128. (Previously Presented) The apparatus according to claim 14, wherein the reduced pressure supply means is adapted to maintain at least 0.11 atm of reduced pressure.

129. (Previously Presented) The appliance according to claim 23, wherein the suction source is adapted to supply at least 0.11 atm of reduced pressure.

130. (Previously Presented) The apparatus according to claim 27, wherein the pump is adapted to supply at least 0.11 atm of reduced pressure.

131. (Canceled).

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

132. (Previously Presented) The apparatus according to claim 52, comprising a source of suction cooperating with said cover and seal to supply reduced pressure of at least 0.136 atm beneath said cover.

133. (New) The appliance according to claim 9, comprising a porous material comprising a synthetic polymer for placement under the cover at the wound.

134. (New) The appliance according to claim 13, comprising a porous material comprising a synthetic polymer for placement under the cover at the wound.

135. (New) The appliance according to any one of claims 23, 133, and 134, wherein the porous material comprises foam.

136. (New) The appliance according to any one of claims 23, 133, and 134, wherein the porous material comprises a honeycombed sheet.

137. (New) The appliance according to any one of claims 23, 133, and 134, wherein the porous material comprises a mesh.

138. (New) The appliance according to any one of claims 23, 133, and 134, wherein the porous material comprises a porous sheet.

139. (New) The appliance according to any one of claims 23, 133, and 134, wherein the porous material comprises polyethylene, polyester, or combinations thereof.

140. (New) The apparatus according to any one of claims 14, 27, 37, and 52, wherein the porous material comprises foam.

141. (New) The apparatus according to any one of claims 14, 27, 37, and 52, wherein the porous material comprises a honeycombed sheet.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

142. (New) The apparatus according to any one of claims 14, 27, 37, and 52, wherein the porous material comprises a mesh.

143. (New) The apparatus according to any one of claims 14, 27, 37, and 52, wherein the porous material comprises a porous sheet.

144. (New) The apparatus according to any one of claims 14, 27, 37, and 52, wherein the porous material comprises polyethylene, polyester, or combinations thereof.

145. (New) The device according to claim 33, wherein the porous material comprises foam.

146. (New) The device according to claim 33, wherein the porous material comprises a honeycombed sheet.

147. (New) The device according to claim 33, wherein the porous material comprises a mesh.

148. (New) The device according to claim 33, wherein the porous material comprises a porous sheet.

149. (New) The device according to claim 33, wherein the porous material comprises polyethylene, polyester, or combinations thereof.

150. (New) The method according to claim 19, comprising locating a porous material comprising a synthetic polymer under the cover at the wound.

151. (New) The method according to claim 30 or 150, wherein the porous material comprises foam.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

152. (New) The method according to claim 30 or 150, wherein the porous material comprises a honeycombed sheet.

153. (New) The method according to claim 30 or 150, wherein the porous material comprises a mesh.

154. (New) The method according to claim 30 or 150, wherein the porous material comprises a porous sheet.

155. (New) The method according to claim 30 or 150, wherein the porous material comprises polyethylene, polyester, or combinations thereof.

156. (New) The method according claim 19, 30, or 150, wherein the wound consists of epithelial and subcutaneous tissue.

157. (New) The method according claim 19, 30, or 150, wherein the wound comprises epithelial and subcutaneous tissue.

158. (New) The method according claim 19, 30, or 150, wherein the wound comprises a pressure sore.

159. (New) The method according claim 19, 30, or 150, wherein the wound comprises an ischemic wound.

160. (New) The method according to claim 19, 30, or 150, wherein the selected stage of healing comprises substantial closure of the wound.

161. (New) The method according to claim 19, 30, or 150, wherein the selected stage of healing comprises substantially filling the wound with granulation tissue.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

162. (New) The method according claim 19, 30, or 150, wherein the selected stage of healing comprises migration of epithelial and subcutaneous tissue toward the wound.

163. (New) The method according claim 19, 30, or 150, wherein the selected stage of healing comprises re-epithelialization of at least a portion of the wound.

164. (New) The method according claim 19, 30, or 150, wherein the selected stage of healing is a reduction in the volume of the wound by a predetermined amount.

165. (New) The method according claim 19, 30, or 150, wherein the selected stage of healing is a reduction in the diameter of the wound by a predetermined amount.

166. (New) The method according claim 19, 30, or 150, wherein said selected stage of healing is a reduction in the depth of the wound by a predetermined amount.

167. (New) The method according to claim 19, 30, or 150, wherein the step of maintaining reduced pressure comprises uniformly applying reduced pressure across at the wound bed.

**Application No.** 09/863,234  
**Docket No.** 0101-P00636US4

**Art Unit** 3736  
**Examiner:** Lacyk, J.

**REMARKS**

Claims 9-14, 16-19, 23-30, 32-50, 52-56, 84-130, and 132-167 are pending in the application, with claim 131 canceled above and dependent claims 133-167 newly presented to claim additional aspects of Applicants' invention.

Independent claims 9, 13, 14, 19, 23, 24, 27, 30, 33, 37, and 52 have been amended above to recite additional features of Applicants' invention. In addition, claims 13, 19, 23, 41, and 53 have been amended above to effect clerical revisions. Also, as noted above in the claim listing, the dependent claims have been variously amended to comport with the amendments to the independent claims and/or recite additional aspects of Applicants' invention.

Entry and consideration of the above claim amendments is respectfully requested. The Examiner is invited to telephone the undersigned in the event that a telephone interview will advance prosecution of this application.

Respectfully submitted,

/Niels Haun/

Dear Sir:

Please amend the above-identified application, without prejudice or disclaimer, as follows:

**Amendments to the Claims** are reflected in the listing of claims which begins on page 2 of this paper.

**Remarks** begin on page 22 of this paper.
